EXP-NO: 2

LEARNING AND ASSIGNMENT OF IP ADDRESS MANUALLY TO COMPUTER

AIM:

To know IP addressing and manually assign an IP address to a computer. To verify the assigned IP Address using LINUX networking commands.

THEORY:

An IP address is a unique numerical address assigned to every device connected to a network. It enables communication between device over a network An IPv4 address consists of four octets separated by dots (Eg: 192.168.1.10)

An IP address can be Assigned either manually (Static IP) or automatically (Dynamic IP) using DHCP

A manually Assigned Ip Address remain unless changed by the user along with the IP address. Parameter includes the Subnet

Mask, Default Gateway, and DNS Server are also configured for Proper network communication

COMMANDS AND SAMPLE OUTPUT:

1. Display all IP Address

Command:

IP Address Show

Sample Output

2: ens 160:

inet 172.16.211.128/24

inet 6 fe80::20c:29a1::fe75:9927/64

Observation:

Displays the IPV4 and IPV6 address of all Networks

2. Display of Specific network interface:

Command:

ip addr show dev ens 160

Sample Output

2: ens 160

inet 172.16.211.128/24

RESULT:

The IP Address were manually Assigned and Verified Successfully using LINUX Networking Commands
